

## NSure Cloud Workspace Backup

Backup your entire Office 365 or Google Workspace environment - across mail, folders and more.

### Don't fall into the cloud backup gap

Organisations are finding themselves with a gap in their backup strategy: they use cloud backup for their main IT infrastructure, and they use Office 365 or Google Workspace for user email, calendar and files.

However, there's a common misconception about public cloud workspaces like Office 365 or Google Workspace – many organisations using them don't think they need to be backed up.

SaaS providers like Microsoft and Google are only responsible for the security of their cloud environment, organisations themselves are responsible for their own network and data security.

This creates a serious **cloud data security gap**.

### NSure Cloud Workspace Protects:

- **Files in Google Drive or OneDrive:** All files and folders with file structure intact
- **Contacts:** Contact information
- **Calendar:** Events (including recurrence, attendees, notes), attachments and any calendars owned by users.
- **Mail:** All emails, attachments, notes and folder structure
- **Microsoft Teams:** Files, conversations, and calendar meetings in Microsoft Teams public channels
- **SharePoint:** Folder structure, document libraries, site assets and more

70%

By 2022, 70% of businesses will suffer an unrecoverable data loss in SaaS applications.

78%

By 2022, 78% of businesses will run almost entirely on SaaS.

# Protecting the cloud

More and more businesses are now realising that their Office 365 and Google Workspace environments are potentially vulnerable without the right security and backup systems in place. These cloud platforms will soon become a key target for savvy cyber criminals who are recognising this gap in organisations' security planning.

To protect your cloud workspaces and versioning, having a separate backup is imperative and will become increasingly important as more organisations migrate to Office 365 and Google Cloud.

**NSure Cloud Workspaces** from Novus delivers this and more.

## NSure Cloud Workspace Backup

Novus offers a service to deliver a multi-layered backup approach to your Office 365 or Google Workspace environment, so that if a criminal or an internal user deletes or compromises data, you can still access your files.

Recover accidentally or maliciously deleted Office 365 or Google Workspace data

Prevent cloud workspace data from being deleted by former employees or deprovisioned licenses

Guard against Office 365 / Google Workspace app outages, failed 3rd party integrations, or ransomware attacks

UK support for help when you need it most - we're just a phone call away

Licensed per user, and options for unlimited storage

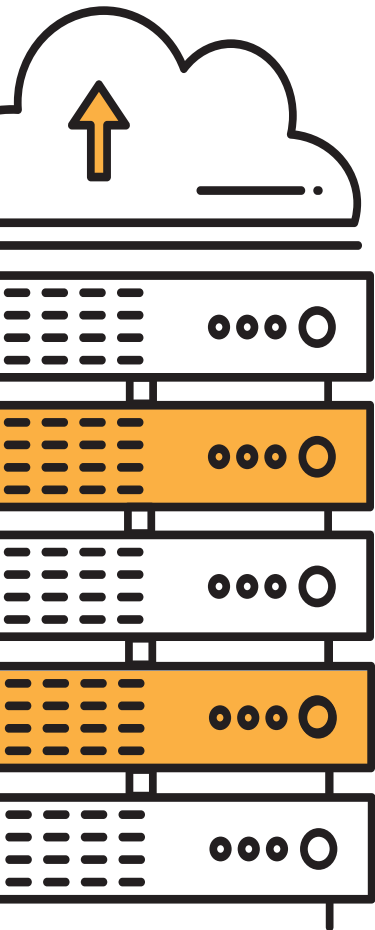

# NSure Cloud Workspace Backup

## Protect

- ✓ **Automated backups** up to 3 times a day to reduce data loss
- ✓ **Cloud managed user interface** means you can check on your backup status at anytime
- ✓ **Fast restore** and recovery in just a few clicks
- ✓ **Clever search capability** to let you drill down to specific emails or folders
- ✓ **Full service restore** with files and folder structure intact

## Secure

- ✓ **SOC 2 Type II** audited
- ✓ **Supports HIPAA compliance** needs
- ✓ **Data encryption** both at rest and in transit
- ✓ **Data controls** and monitoring tools, including audit logs, uptime and availability SLAs, and export capabilities
- ✓ **Satisfies many security compliance** requirements

## Beyond the cloud

It's not just about protecting your cloud workspaces, we can also help with a secure offsite backup option for your infrastructure.

Backing up onsite to a network attached storage device doesn't give you the required 'air lock' between your infrastructure and your backup data – after all, if your entire network was compromised, it would affect your backup server too.

### NSure Backup and Data Recovery

An offsite, cloud-based backup solution located in Novus' UK datacentre.

### NSure Rebuild

If your site goes down and all local data and systems are lost, we can rebuild your IT environment; across data, applications, servers and devices.
